Subject: Submission of Project Report on “Financial Performance Analysis on Pharmaceuticals Companies”

Dear Madam,

With due respect it is stated that I am submitting my Project Report on “Financial Performance Analysis on Pharmaceutical companies Ltd” which is the requirement for obtaining the degree of Bachelor of Business Administration (BBA) offered by United International University (UIU). It was great experience for me to do the report on this interesting subject. This work has helped me to apply my theoretical knowledge into practice. I have realized that theoretical knowledge is not enough we need practical experience and knowledge also.

I hope that you will like my project report. This report is very informative. I have tried my best to make the report informative and useful for other numerical uses. It will be delightful to me if you accept my project report.

Yours Sincerely,

Sumaiya Akter Khanom
ID No. 111 151 496
Program: BBA
United International University (UIU).
ACKNOWLEDGEMENT

The Project paper on “Financial Performance Analysis on Pharmaceuticals Companies” is a great pleasure to me to complete. I have taken great aptitudes to complete this report. With the kind, help of the faculty member encouraged me to do this on time.

Firstly, I am thankful to the Almighty Allah for his kindness and helpful gratitude to complete this report. I am thankful to my honorable faculty “Ishrat Jahan” madam who helped me a lot and guided me to finish the project report from first to last.

I would like to express my gratitude to my parents for their continuous support and prayers. Their support and motivation encouraged me to overcome any obstacles and complete my BBA.

I would like to thank my friend who has supported me and helped me to accomplish this report by providing proper information. Without these helps, I would face difficulties but this kind support helped me to complete the report.

Also indebted to those websites and information desks that provided me information and I tried to use those data properly to complete this report.

However, any reader or faculty may find my report error some in editing or any misinterpretation mistakes. Apart from this any correction and suggestion from any person is warmly welcome.
ABSTRACT

Bangladesh is a country of potentiality. There are lot of industries in Bangladesh. The pharmaceutical industry is growing faster. There is a huge demand of medicines both in domestic and international markets. This project report is prepared on the performance analysis of some leading pharmaceutical industries. The focus is on their financial position. There is company profile, mission, and vision of BEXIMCO PHARMA, SQUARE PHARMA, ACME, IBN SINA, ACI Ltd. It also included the ratio analysis from 2014 to 2018. They have lacks in performance. I have added recommendation and findings to overcome these problems. All of the companies are the future of Bangladesh’s drug industry. They are not only doing business but also helping the economy to grow. They are following corporate social culture, providing employment and empowering women in the society. I have suggested some ways they can provide help and flourish their business.

CHAPTER 1

1. INTRODUCTION
1.1 Introduction

Bangladesh is an industry friendly country. There are many industries in Bangladesh. Both domestic and foreign investors have vast opportunity to fund or make industries. The pharmaceutical industry is one of the most popular and big industry in Bangladesh. It is one of the most developing sectors of Bangladesh. Since early eighties, this industry is growing faster. Bangladeshi pharmaceuticals are making medicines. Those are fulfilling domestic demand and exporting in international markets. The domestic demand meets 97% of national demand. There is a huge share of Bangladeshi medicine in international market. The pharmaceutical has a huge in GDP of Bangladesh. In 2016-2017, the pharmaceutical industry contributed 1.85% of the GDP. There are 257 licensed companies, at present 150 are functional.

According to the experts, they expect pharmaceutical sector of Bangladesh will grow at 15% in next four to five years. There are some following factors that will influence these has given below:

- **Economic and financial growth:** The country’s growth is growing by 6% to 7% every year. This is contributing much higher in per capita and helping growing and affluent people. The income level will increase over the next decade and will influence higher consumer spending.

- **Population growth increase:** Bangladesh’s population is growing at a pace of 1.3%. Already Bangladesh has high population. This population growth will increase demand in near future.

- **Healthcare:** Bangladesh’s population life expectancy has increased up to 71 years. They are expecting better healthcare facilities to solve any health-related problems. As the life expectancy will increase, the demand of life care and health care aid will increase.

- **Environmental safety issues:** There is problem of adulteration of food, contaminated and polluted food and environment problems. The people of Bangladesh are trying to overcome from these environmental issues. This will increase the demand of rigorous healthcare services for people.
Growth trend of pharmaceutical production in Bangladesh is shown in a graph below:

![Growth trend in pharmaceuticals production](image)

**Figure: Growth trend in pharmaceuticals production**

**Source:** IMS health

From this graph, we can easily comment that the pharmaceutical production in Bangladesh is increasing. In 2012, there was 93,904 BDT. In 2013, it increased as 97,589 BDT. In 2014 it increased as 10,5864 BDT. In 2015, it increased as 119,548. In 2016, it was 156,401 BDT and in 2017, it was 187,556 BDT.

### 1.2 THE PROJECT PAPER

I am a student of Bachelor of Business Administration (BBA), major in Accounting. As I am an Accounting background student, it is necessary to know about the financial position of a company or its position in the market. The industries and business build the economy of a country. The Accounting background student like me should know the importance of ratio analysis and the financial position. In my four-year BBA studies, I have only learned the theoretical aspects but by doing this project, I am able to connect me with the real scenario of a company.
University has provided me this type of opportunity to do something real life stuffs. There are many private and multinational business organizations if we do not understand their market position it will be a loss for us as we are business background student. The university provide us opportunity to know any business organization by providing Internship or Project for 3-4 months. I have chosen the project report as I think this theoretical knowledge will help me more to make a report on this interesting subject “Financial Performance Analysis on Pharmaceuticals companies”.

There are many industrial sectors in Bangladesh but most prominent growth is in the pharmaceutical industry. I have gathered a lot of experience when doing this project report. I hope this report will help others to know about the financial positions and importance of ratio analysis. That is why I have chosen the topic “Financial Performance Analysis on Pharmaceuticals companies”. I am very much thankful to my honorable faculty for giving me this opportunity.

1.3 ORIGIN OF THE REPORT

The project program is a particular report that is of “Financial Performance Analysis on Pharmaceuticals Companies”. University provide the opportunity to the students to gain some real-world knowledge. I have learned a lot when doing this report. I have gathered information of how actual companies work. This project paper is required to complete for the students of BBA. This is a four months project. When any student complete 120 credits out of 123 credits, he or she is eligible for this. Student can choose internship or project any of this.

1.4 OBJECTIVE OF THE STUDY

The objective of the study is to gather real world business techniques and realize their market position. Also, merge the four years theoretical knowledge with the real context. This project is compulsory to make for any BBA graduating student. The objectives are:

- To understand the overall strategy of the selected companies.
- To analysis the ratios for five years.
- To compare with the industry average.
- To find the problems and recommend suggestions to overcome the problems.
- To know the importance of pharmaceutical companies in Bangladesh that has vast impact on economic growth.
1.5 SCOPE OF THE REPORT

The basic area for the report is to analysis the activities of ratio and performance of management for the selected companies. The overall view and attention has given to understand each company’s financial position, mechanism. The other important aspects are present with clarification along with the depth of study.

1.6 METHODOLOGY

This report is prepared based on the experience gathered while doing the project. I have studied about the pharmaceuticals industry of Bangladesh, selected some leading companies, studied their annual reports and prepared this report. I have tried to apply my theoretical knowledge to find out the ratios. I hope this will be enough to find out the real picture of the pharmaceutical industry of Bangladesh based on the selected companies.

Primary Data:

There is no primary data used for preparing the report.

Secondary Data:

I have used the secondary data to prepare the report-

- Official website of the companies.
- Other journals and web papers relating to the topic.
- Product details of the companies.
1.7 LIMITATION OF THE STUDY

I have faced a lot of limitation while doing this project report. There was also time limitation. Four months’ time is not enough to understand overall of any company. However, it helped me a lot to understand about the pharmaceutical industry.

- One of the limitations is shortage of time. I had to collect all information in this short time and selected necessary information to complete the project.
- I faced difficulties to gather information. Some information is incomplete or not present at all.
- Because of the limitation of information there is lacks of presentation of information. There was some confidential data between the management and companies. Also, between banks and stockholders for that I had trouble to find some data.
2. INDUSTRY OVERVIEW
2.1 INDUSTRY OVERVIEW

The Pharmaceutical industry is one of the most advanced sectors with newest technologies in Bangladesh. The pharmaceutical industry has grown in last two decades. The skilled human resource and professionals are innovating new formulas and lifesaving medicine. Government is focusing more in this sector and many companies get government incentives for their research and development. This drug industry is helping to improve social problem by corporate social responsibilities.

2.2 INDUSTRY BACKGROUND

The pharmaceutical industry is classified in two categories:

1. **Patent medicine**
   - The medicines, which are invented by the company, is called patent medicine. The company invent those medicines in their laboratories by own research team. They patent the formula and enjoy monopoly market. After that, they sell the patent in the market so that other companies can go into mass production of that medicine.

2. **Generic medicine**: The medicines which are produced in a mass scale of production is called generic medicine. Several company can produce such medicine in large scale. This generic medicine market is more competitive. Sometimes its price is higher.

2.3 INDUSTRY SIZE

In 2018, the market size of pharmaceutical industry in Bangladesh is 20511.8 crore that is 15.6% compound annual growth rate in previous five years. Only 3% of drugs are imported and 97% comes from local companies. At present, there are 300 Pharmaceuticals Company is operating. The positive development and good quality enabled Bangladesh to export local manufactured medicines in global market.

2.4 LOCAL MARKET OVERVIEW

The pharmaceutical industry of Bangladesh’s market is the market place of generic medicines. Companies sell medicines as private or Government Company. Both are bound to provide and maintain the standard of healthcare facilities. The domestic companies have more control over the
drug industry and government encourage local companies very much. Bangladeshi local pharmaceuticals cover and meet the demand of 98% and rest is fulfill by MNC’s. The Square and Beximco hold 30% market together.

The top ten market players of the pharmaceuticals industry are:

CHAPTER 3

3. COMPANY OVERVIEW
3.1 Beximco Pharmaceuticals

Beximco Pharmaceuticals Ltd is a leading manufacturer and exporter of medicine. They incorporated in Bangladesh in late seventies. The Beximco started as a distributor. They imported products from global Multi-National Companies (MNC) like Bayer’s, Germany and Upjohn, USA and sold in the local markets. Later they started manufacturing and distributing under licensing arrangement. Beximco Pharmaceuticals is one of the largest exporters of medicine in Bangladesh.

**Mission of Beximco Pharma:**

The mission of Beximco Pharma is to enrich human health and well-being by providing new contemporary and affordable medicines. Manufacturing in full compliance to maintain global quality standards. They continuously strive to develop their core capabilities to meet the medical needs of the patients. Also, try to deliver outstanding results for their shareholders.

**Vision of Beximco Pharma:**

The vision of Beximco Pharma is to be the most trusted successful and admired pharmaceutical company in Bangladesh. They have region focus on strengthening research and development capabilities to create partnerships across the globe.

3.2 Square Pharmaceuticals

The Square Pharmaceuticals Limited was establish in 1958. It is the largest pharmaceutical company in Bangladesh. The Square Pharmaceuticals is holding first position among all multinational and national companies since 1985. It was enlisted in stock exchange as a public ltd company in 1991.

**Mission of Square Pharmaceuticals:**

The mission of Square Pharmaceuticals is to produce and provide new innovative and quality life and healthcare products for people. They try to maintain strong ethical standards in operating business. They also try to ensure benefit the stakeholders, shareholders and the society.
Vision of Square Pharmaceuticals Ltd:

The square pharmaceuticals see the business as a mean material for wellbeing of the society. They have vision of wellbeing of the investors, employees. They try to create and acceleration of wealth through financial gains made moral gain as a part of human civilization.

Objective of Square Pharmaceuticals:

The objective of Square Pharmaceuticals is to fulfill their mission and vision by transparent business operation using legal and social framework.

3.3 ACME Laboratories Ltd.

The ACME laboratories ltd was established and founded in 1954. It was a proprietorship firm and situated in Narayangonj. The founder late Hamidur Rahman Sinha started it with noble and holistic motto. He wanted to ensure healthy and happiness for all. ACME was convert into a private ltd in 1976.

Mission of ACME Ltd:

The mission of ACME Ltd is to ensure health, vigor and happiness for all. They try to manufacture ethical drugs and medicines that are of highest quality. Also affordable for all class of people. They try to expand their pharmaceutical business both in local and global market. They have a mission of harmonizing employees with environmental issues.

Vision of ACME Ltd:

The mission of ACME is to ensure health, vigor and happiness for all.

3.4 IBN SINA Pharmaceuticals Industry Ltd.

The IBN SINA Pharmaceuticals Industry was establish in the year of 1983. They have manufacturing unit in Gazipur. The manufacturing unit is develop with new technology. They have high facilities
Vision of IBN SINA:

The vision of is to be the most trusted successful and admired pharmaceutical company in Bangladesh

3.5 ACI Pharmaceuticals Ltd.

With almost three decades of collaborating life and engendering hope, ACI is one of the top pharmaceutical companies in Bangladesh, employing more than 5,000 people all over the country. As a progressive and forward-thinking company, ACI Pharma is dedicated to improve the health of people of Bangladesh through introduction of innovative and reliable pharmaceutical product.

Mission of ACI Pharmaceuticals Ltd:

ACI’s mission is to ensure quality of life of people through advanced technology, skills and knowledge. They are committed to ensure the pursuit of excellence by providing excellent products and by innovative process. Customer satisfaction is also concern of ACI.

Vision of ACI Pharmaceuticals Ltd:

Encouraging and assisting in the qualitative improvement of services. Also establish harmonious relation between customer and distributors.
Chapter 4

4. THEORETICAL ANALYSIS
4.1 Ratio Analysis

4.1.1 WHAT IS RATIO

Ratio: Ratio means the relationship among selected items that expresses the mathematical relation between two quantities. In various ways like percentage, rate or simple proportion this relationship has expressed. Ratio provide information about underlying condition of the company in comparison with time or competitors. Therefore, in the discussion of ratios we will use the following types of comparison.

4.1.2 LIQUIDITY RATIO

Current ratio: Current ratio is one of the best-known and widely used ratio formula. It is used to measure the short-term liquidity. The more the current ratio is the better for the company.

Acid test ratio: Acid test ratio is used to measure the least liquid current asset. The firm may have overestimated the sales value and overbought or overproduced for this circumstance company uses to measure least liquid current assets. It is calculate by subtracting inventory from current liabilities and that is divided by the current liabilities.

4.1.3 ACTIVITY RATIO

The receivables turnover ratio: The receivables turnover ratio is an activity ratio measuring how efficiently a firm uses its assets. Receivables turnover ratio can be calculated by dividing the net value of credit sales during a given period by the average accounts receivable during the same period.

Average collection period: Average collection period is refer to as the ratio of days to sales outstanding. It is the average numbers of days it takes a company to collect its accounts receivable.

The inventory turnover ratio: The inventory turnover ratio is an efficiency ratio that shows how effectively inventory is manage by comparing cost of goods sold with average inventory for a period.

The asset turnover ratio: The asset turnover ratio is an efficiency ratio that measures a company's ability to generate sales from its assets by comparing net sales with average total assets.

Fixed-asset turnover: Fixed-asset turnover is the ratio of sales to the value of fixed assets. It indicates how well the business is using its fixed assets to generate sales.

4.1.4 PROFITABILITY RATIO

Profitability ratios are the most useful ratios to express the profit of an organization. It shows the earnings of an organization compared to its expenses and other relevant costs. Stockholders mainly examine the profitability ratios of a company when they decide to invest. Profit margin, Return on
Asset (ROA), Return on Equity (ROE) etc. here are some profitability ratios with graphical formation.

**Gross profit margin:** Gross profit margin is a financial metric used to assess a company's financial health and business model by revealing the proportion of money left over from revenues after accounting for the cost of goods sold.

**Net profit margin:** Net profit margin is the percentage of revenue left after all expenses has deducted from sales. The measurement reveals the amount of profit that a business can extract from its total sales.

**Return on assets (ROA):** Return on assets is a financial ratio that shows the percentage of profit a company earns in relation to its overall resources. It is commonly defined as net income divided by total assets.

**Return on equity (ROE):** Return on equity is the amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested.

**4.1.5 COVERAGE RATIO**

**Cash coverage ratio:** The cash coverage ratio is useful for determining the amount of cash available to pay for a borrower's interest expense. It expresses as a ratio of the cash available to the amount of interest to be paid.

**Interest coverage ratio:** The interest coverage ratio it measures a company’s ability to make interest payments on its debt in a timely manner. It calculates the firm’s ability to afford the interest on the debt. The more the ratio, the more the more the firm’s ability to make interest payments on its debt, and the less the financial risk the firm has to bear.

**4.1.6 LEVERAGE RATIO**

**Debt to equity ratio:** Debt to equity ratio used to measure a company’s financial leverage during the year. This ratio is an important because it shows the company financing that is coming from its investors and creditors. It is calculated by dividing the net income and total equity.

**Debt to total asset ratio:** The debt to total asset ratio is a coverage or solvency ratio. It measures the percentage of assets and compares the total debt to asset needed to pay liquidity to its long-term debt.
Chapter 5

5. INDUSTRY RATIO ANALYSIS
5.1 Industry Ratio Analysis

There are 50+ companies in Bangladesh for this health sector. However, for the project report I took only five companies as industry combination. Those five companies already mentioned. Now I present the industry average results. Note that these average results of each ratio of each compared with all of five companies.

5.1.1 Current asset

Comment: From this presentation, the industry has enough current assets, which is good for this sector. After 2016 results of following is good.
5.1.2 Acid Test Ratio

Comment: The industry shows good financial performance. Acid test measure the enough money at hand. The results almost more than one point.

5.1.3 Receivable turnover ratio
Comment: In 2014 and 2015 the ratio, look higher. But the rest of the year it’s declining. Industry should focus on it.

5.1.4 Average Collection Period

![Average Collection Period Graph]

Comment: If we look over this graph, we can say in 2017 and 2018 the result is increasing. Where in 2014, 2015 was lower.

5.1.5 Inventory turnover Ratio

![Inventory Turnover Graph]
Comment: The inventory turnover ratio is an efficiency ratio that shows how effectively inventory is managed by comparing the cost of goods sold with average inventory for a period. The graph shows that the ratio is stable in these years.

5.1.6 Total Asset turnover ratio

Comment: This ratio shows how efficiently asset management works. In this graph, the results show good for the industry. In 2014 was highest among 5 years. Year by year the result declined
5.1.7 Fixed Asset turnover ratio

Comment: This ratio shows how efficiently asset management works. In this graph, the results show good for the industry. In 2014 was highest among 5 years. Year by year the result declined
### 5.1.8 Gross Profit Margin

Comment: Gross profit margin is a financial technique used to identify a company's financial condition and business model by revealing the proportion of money away from incomes after accounting for the cost of goods sold. The industry shows good result. In 2018, the result has gained highest position.
5.1.9 Net Profit Margin

Comment: the industry shows good net profit margin. All of each year the results shows almost same.

5.1.10 Return On asset
Comment: Return on assets is a financial ratio that shows the percentage of profit a company earns in relation to its overall resources. It is commonly defined as net income divided by total assets. The industry shows moderate performance here

5.1.11 Return on equity

Comment: Return on equity is the amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested. This industry has shown better equity return.
Comment: The cash coverage ratio is useful for determining the amount of cash available to pay for a borrower's interest expense. It is express as a ratio of the cash available to the amount of interest to be paid. The industry little bit slowly here.
Comment: The interest coverage ratio measures a company’s ability to make interest payments on its debt in a timely manner. It calculates the firm’s ability to afford the interest on the debt. The more the ratio, the more the firm’s ability to make interest payments on its debt, and the less the financial risk the firm has to bear, in 2018 the result was highest.
Comment: Return on assets is a financial ratio that shows the percentage of profit a company earns in relation to its overall resources. It is commonly define as net income divided by total assets. In 2018, the result was highest.
Comment: The debt to total asset ratio is a coverage or solvency ratio. It measures the percentage of assets and compares the total debt to asset needed to pay liquidity to its long-term debt. The result was almost same.
Chapter 6

6. COMPANY’S RATIO ANALYSIS AND INTERPRETATION
6.1 Ratio analysis of Beximco Pharmaceuticals

CURRENT RATIO

Comment: Here the Beximco Pharmaceuticals has current ratio in 2014 is 1.77. In 2015 they has current ratio 1.72, in 2016 it is 2.85. In 2017, it is 2.68 and 1.33 in 2018. From this graph, we can assume that Beximco has more cash than liabilities. They have good current ratio in 2016 and 2017. Therefore, in 2016 they have 2.85 times more than liabilities and in 2017 it is 2.68 times.

The graphical presentation shows the company’s current ratio. I have taken five other companies as competitors; I have calculated the industry average. So that I can evaluate this ratio by intercompany comparison as well as industry average. In 2014 there are 1.77taka current asset against 1-taka liability. It has increased in 2016 as 2.85 and in 2017 it decreased and more decreased which means it is not better for the company. In 2018 but not as low as it was in 2014. Further, we can analysis its ability to pay liability with industry average, which is good in 2016. The company was doing better that year. From the comparison, we can say that Beximco Pharma is doing well in these previous consecutive years.
Comment: As from the graph, we can assume that Beximco had good position in 2016 and relatively good position in 2017 in terms of the ratio.

The graphical presentation shows the company’s Acid test ratio. In 2014, there is 0.988-taka current asset except inventories against 1-taka liability. If we compare with other years, it was 1.288 in 2015 and was higher in 2016. However, it declined in 2018 but was better than 2014. We can say that it doing better. The company has increased its liquid assets to pay its liability. If we compare with the industry average, The Beximco had good position in 2015 to 2018; the industry average was low in 2018. The Beximco is doing well than its competitors.
THE RECEIVABLES TURNOVER RATIO

Comment: In 2016, the ratio was higher. The graphical presentation shows the company’s receivables collection. In 2016, the company can collect 13.01 times the receivables through the year, which is better than the industry average. It has declined in next years that is in 2017 and 2018. Which indicates that the company is unable to collect its receivables against the sales. Further, we can analysis its receivables collection. This is not much good according to industry average for the company.
AVERAGE COLLECTION PERIOD

Comment: The graphical presentation shows the company’s average collection period. In 2018, the ratio was higher than other years. Relatively low in 2016. In 2016, the company took 28.03 days for its average collection, which is better than the industry average. However, in other years the company’s average was good than the industry average. Therefore, it indicates that Beximco pharmaceuticals is able to collect its receivables easily.
Comment: The graphical presentation shows the company’s inventories turnover ratio. The graph shows that the ratio is higher in 2016. In 2016, the company can collect 4.103 times the inventories through the year. It is decline slowly. Compared with the industry average, business and competitors it is not well.
THE ASSET TURNOVER RATIO

Comment: From the graphical presentation, total assets turnover is increasing in frequent years. In 2016, the ratio was higher. In 2016, it was 0.66 and relatively declined after that. However, the company is efficient to generate revenue comparing to industry average.
Comment: The fixed asset turnover is an efficiency ratio that measures a company’s return on their investment in property, plant and equipment by comparing net sales with fixed assets. From the tabular and graphical presentation, the ratio was high in 2016 but it declined in 2017 and 2018. They can fix it and get efficient revenue in recent years.
GROSS PROFIT MARGIN

Comment: Gross profit margin is a profitability ratio that compares the gross margin of a business to the net sales. This ratio measures how profitable a company sells its inventories or merchandise. From the graphical presentation, from 2015, through 2018, the ratio was almost same but there is difference in points. Gross profit is in an average rate and deviation is not too much within years, which indicates that company moderately performs to generate the revenue, but in according to industry average and competitors company is doing better.
Comment: From the graphical presentation, net profit margin is in an average rate and deviation is not too much within years, which indicates that company moderately performs to generate the revenue, but in according to industry average and competitions, company is doing better. According to this ratio in 2015, the industry position was good.
RETURN ON ASSETS (ROA)

Comment: From the graphical presentation, return on assets is in an average rate and deviation is not too much within years, which indicates that the company moderately performs to generate the revenue but in according to industry average company is not doing better and operating cost is high. In 2016, ROA was higher.
RETURN ON EQUITY (ROE)

<table>
<thead>
<tr>
<th>Year</th>
<th>ROE</th>

7. CONCLUSION AND RECOMMENDATION
7.1 Conclusion and Recommendations

Bangladesh’s pharmaceutical industry has grown steadily over the past five years. From 2012 to 2017, CAGR was 15% for historical five years and 21% for historical three years from 2014 to 2017. The market size of pharmaceuticals could hit around BDT 3,30,000 million by 2024, according to industry experts. According to the Bangladesh Association of Pharmaceutical Industries (BAPI) and DGDA, approximately 257 licensed pharmaceutical manufacturers operate in Bangladesh and approximately 150 are functional. Such manufacturing firms meet approximately 97% of local demand. Specialized products such as vaccines, cancer drugs and hormone medications were imported to meet these requirements. There is a high concentration of the drug industry. The largest portion of the industry dominates the top 20 participants. For different brands, each company has the same medication. Companies compete aggressively with each other to win market share.

From the analysis, I can conclude that Bangladesh’s pharmaceutical industry is growing day by day. The global generics market is estimated at around $1.06 trillion and is projected to grow by $1.30 trillion by 2020. Generic drugs will continue to grow at a healthy rate of over $150 trillion by 2020. Healthcare costs have risen, particularly medicine costs have become a global concern. Pharmaceutical companies in Bangladesh are ideally positioned to provide high-quality contract manufacturing services to companies from developed countries. These companies are trying to expand geographical scope. Most facilities are licensed by international regulatory authorities. Patent medicine industry has lower position. Therefore, the leading industry of our country should focus on research and development sector. If the pharmaceuticals companies use this sector effectively, they can get monopoly benefit. All over, the world is trying to invent more in patent medicines. Our pharmaceuticals company has strong position in generic medicine sector. However, the leading companies have some problems too. The government is supporting well but the operating cost and import cost is high. As a result, their profit is decreasing. To overcome such problems, this sector needs more incentives. Bangladesh exports to more than 100 nations, including some developed countries, medicines and healthcare services. For Bangladesh, it is a significant development that while being a member of the LDC countries, Bangladesh's pharmaceutical products compete with the developing countries and some developed countries. There is therefore no doubt about the ability to produce high-quality drugs. Growth in this sector is gigantic. Therefore, immediate attempts by both government and non-governmental organizations can make this industrial sector more likely to contribute to Bangladesh's economic growth.
